

MICROSOFT AZURE

DATAFLOW ACTIVITY

In Resource Group, Storage account and Data Factory are created

2 containers were created in storage account,

1. input
2. output

Files uploaded into input container

The screenshot shows the Microsoft Azure portal interface for the 'input' container. The container is highlighted with a red box. Below the container name, there is a table listing the files uploaded into it. The table has columns for Name, Last modified, Access tier, Blob type, Size, and Lease state. The files listed are 'temp_1.csv', 'temp_2.csv', and 'weather_data.csv'.

Name	Last modified	Access tier	Blob type	Size	Lease state
temp_1.csv	24/8/2026, 4:37:44 pm	Hot (Inferred)	Block blob	86 B	Available
temp_2.csv	24/8/2026, 4:37:44 pm	Hot (Inferred)	Block blob	86 B	Available
weather_data.csv	24/8/2026, 4:37:43 pm	Hot (Inferred)	Block blob	209 B	Available

Select new dataflow from **Data Flows** and added **Source**

Enable **DataFlow Debug**

The screenshot shows the Microsoft Azure Data Factory portal interface for the 'dataflow1' data flow. The 'Data preview' tab is selected, showing a table of data. The 'Data flow debug' toggle is enabled. The table has columns for date, city, temperature_c, humidity_pct, and condition. The data is as follows:

date	city	temperature_c	humidity_pct	condition
2026-08-19	New York	22.5	60	Sunny
2026-08-20	London	18.3	75	Cloudy
2026-08-21	Tokyo	25.1	68	Rainy
2026-08-22	Sydney	19.8	55	Clear
2026-08-23	Mumbai	30.2	80	Humid

Datatype is configured according to the Data

The screenshot shows the Microsoft Azure Data Factory interface. On the left, the 'Factory Resources' pane lists 'Data flows' with 'dataflow1' selected. The main workspace shows the 'Projection' tab for 'dataflow1'. A table lists columns with their names, types, and formats. The 'Type' column is highlighted with a red box.

Column name	Type	Format
date	date	Specify format
city	abc string	Specify format
temperature_c	123 integer	Specify format
humidity_pct	123 integer	Specify format
condition	abc string	Specify format

Select Derived Column

The screenshot shows the Microsoft Azure Data Factory interface. On the left, the 'Factory Resources' pane lists 'Data flows' with 'dataflow1' selected. The main workspace shows the 'Data preview' tab for 'dataflow1'. A table lists columns with their names, types, and formats. The 'Derived Column' option in the 'Schema modifier' menu is highlighted with a red box.

UPsert	LOOKUP	ERROR	TOTAL
0	0	0	5

ADD NEW COLUMN

Select Add ->Add Column

Expression is builded

New Column 'temp_F' is added

The screenshot shows the Microsoft Azure Data Factory interface. On the left, the 'Factory Resources' pane lists 'Dataflows' with 'dataflow1' selected. The main canvas displays a data flow diagram with a source 'source1' (Import data from DS_1) and a derived column 'derivedColumn1' (Columns: 6 total). The 'Data preview' tab is active, showing a table with 5 rows and 7 columns. The column 'temp_F' is highlighted with a red box. The 'Properties' pane on the right shows the 'General' tab for 'dataflow1'.

date	city	temperature_c	humidity_pct	condition	temp_F
2026-08-19	New York	22	60	Sunny	71.6
2026-08-20	London	18	75	Cloudy	64.4
2026-08-21	Tokyo	25	68	Rainy	77.0
2026-08-22	Sydney	19	55	Clear	66.2
2026-08-23	Mumbai	30	80	Humid	86.0

DELETE COLUMN

Choose Select

The screenshot shows the Microsoft Azure Data Factory interface. On the left, the 'Factory Resources' pane lists 'Dataflows' with 'dataflow1' selected. The main canvas displays a data flow diagram with a source 'source1' (Import data from DS_1) and a derived column 'derivedColumn1' (Columns: 6 total). The 'Data preview' tab is active, showing a table with 5 rows and 7 columns. The column 'temp_F' is highlighted with a red box. The 'Properties' pane on the right shows the 'General' tab for 'dataflow1'. A context menu is open over the 'temp_F' column, with the 'Select' option highlighted in red.

date	city	temperature_c	humidity_pct	condition	temp_F
2026-08-19	New York	22	60	Sunny	71.6
2026-08-20	London	18	75	Cloudy	64.4
2026-08-21	Tokyo	25	68	Rainy	77.0
2026-08-22	Sydney	19	55	Clear	66.2
2026-08-23	Mumbai	30	80	Humid	86.0

Select the Column want to be deleted (City) and delete

The screenshot shows the Microsoft Azure Data Factory interface. On the left, the 'Factory Resources' pane lists 'Dataflows' with 'dataflow1' selected. The main canvas displays a dataflow diagram with three components: 'source1' (Import data from DS_1), 'derivedColumn1' (Creating/updating the columns: date, city, temperature_c, humidity_pct, condition, temp_F), and 'select1' (Columns: 6 total). Below the diagram, the 'Select settings' tab is active. Under 'Input columns', the 'city' column is selected. A red arrow points to the 'Delete' button in the 'Select settings' tab. The 'Properties' pane on the right shows the 'General' tab with 'Name' set to 'dataflow1' and 'Description' empty.

City Column is deleted

The screenshot shows the Microsoft Azure Data Factory interface with the 'Data preview' tab selected. The 'Data preview' section displays a table with 5 rows and 6 columns: 'date', 'temperature_c', 'humidity_pct', 'condition', 'temp_F', and 'temp_F'. The 'city' column has been removed. The 'Properties' pane on the right shows the 'General' tab with 'Name' set to 'dataflow1' and 'Description' empty.

	date	temperature_c	humidity_pct	condition	temp_F	temp_F
+	2026-08-19	22	60	Sunny	71.6	
+	2026-08-20	18	75	Cloudy	64.4	
+	2026-08-21	25	68	Rainy	77.0	
+	2026-08-22	19	55	Clear	66.2	
+	2026-08-23	30	80	Humid	86.0
