Launch Azure Data Factory Studio

The screenshot shows the Microsoft Azure portal interface. At the top, there's a search bar and a user profile. Below the navigation bar, the 'Overview' page for a Data Factory (V2) named 'bencydatafa' is displayed. The page includes a left-hand navigation pane with options like 'Overview', 'Activity log', 'Access control (IAM)', 'Tags', 'Diagnose and solve problems', 'Resource visualizer', 'Settings', 'Getting started', 'Monitoring', 'Automation', and 'Help'. The main content area shows the 'Essentials' section with details about the Data Factory: Resource group (BENCY_DE), Status (Succeeded), Location (East US), Subscription (Azure subscription 1), and Subscription ID. Below this, there's a large 'Azure Data Factory Studio' logo and a 'Launch studio' button. At the bottom, there are four tiles: 'Quick Starts', 'Tutorials', 'Template Gallery', and 'Training Modules'.

Linked Services created

The screenshot shows the 'Linked services' section within the Microsoft Azure portal for a Data Factory. The left-hand navigation pane is visible, with 'Linked services' highlighted. The main content area shows a table of linked services. A red box highlights the 'LS_ADLS' and 'LS_REST' entries. A notification banner at the top right indicates 'Successfully created LS_ADLS (Linked service)'. The table lists the following linked services:

Name	Type	Related	Annotations
LS_ADLS	Azure Data Lake Storage Gen2	0	
LS_REST	REST	0	

New pipeline created

The screenshot shows the 'Factory Resources' section within the Microsoft Azure portal for a Data Factory. The left-hand navigation pane is visible, with 'Factory Resources' highlighted. The main content area shows a list of resources: 'Pipelines', 'Change Data Capture (preview)', 'Datasets', 'Data flows', and 'Power Query'. A red box highlights the 'Pipelines' resource, and another red box highlights the 'New pipeline' button. Below the list, there's a 'Select an item' prompt with a diagram showing a pipeline flow. The text below the diagram says: 'Use the resource explorer to select or create a new item'.

CopyData is selected from activities and dragged into panel

- Source Dataset configured
- Select **Open this dataset**

Configure BaseURL and RelativeURL from searchapi

The screenshot shows the Microsoft Azure Data Factory portal. On the left, the 'Factory Resources' pane lists 'Pipelines' (1), 'Datasets' (1), 'Data flows' (0), and 'Power Query' (0). The 'DS_REST' dataset is selected. The main pane shows the 'Connection' tab for 'DS_REST', which is linked to the 'LS_REST' service. The 'Base URL' is 'https://www.searchapi.io/api/v1' and the 'Relative URL' is 'search?engine=google_news&q=latest-news'. The 'Properties' pane on the right shows the 'General' tab with the name 'DS_REST' and a description field.

Preview Data

The screenshot shows the 'Preview data' window for the 'DS_REST' dataset. The 'Object' is a JSON array containing search results. The first result is a search for 'latest news' on Google News, showing metadata like 'id', 'status', 'created_at', and 'request_time_taken', as well as search parameters like 'engine', 'q', 'device', and 'hl'. The 'Additional headers' section is empty.

The screenshot shows the 'Preview data' window for the 'DS_REST' dataset, displaying 'organic_results'. The results are a JSON array of search results. The first result is a search for 'Nepal flash floods LIVE: Fresh flood risk warning issued as water level rises at same' on The Hindu, showing metadata like 'position', 'title', 'link', 'source', 'date', 'iso_date', 'snippet', 'is_live', 'favicon', and 'thumbnail'. The second result is a search for 'They Dragged Body Of Nepal Victim From River By Hair, Stole Earrings' on NDTV, and the third result is a search for 'PM Modi heads to Uzbekistan, SCO: meet with Putin on the cards | India News' on Hindustan Times.

File path for **DS_ADLS** configured

- **Container**
- **Directory**
- **FileName**

Sink DataSet Configured and then Debug it

Result fetched to output container

The screenshot shows the Microsoft Azure portal interface. At the top, the navigation bar includes the Microsoft Azure logo, an 'Upgrade' button, a search bar, and a 'Copilot' button. The breadcrumb trail indicates the current location: Home > CreateDataFactory-20260828144441 | Overview > BENCY_DE > bencystorage > BENCY_DE > bencystorage | Containers.

The main content area is titled 'output' and is identified as a 'Container'. Below the title, there is a search bar and a set of action buttons: 'Add Directory', 'Upload', 'Refresh', 'Delete', 'Copy', 'Paste', 'Rename', 'Acquire lease', 'Break lease', and 'Edit columns'. The left sidebar shows the 'Overview' tab selected, with links to 'Diagnose and solve problems', 'Access Control (IAM)', and 'Settings'.

The 'Authentication method' is set to 'Access key (Switch to Microsoft Entra user account)'. Below this, there is a search bar for blobs and a dropdown menu set to 'Only show active objects'. The text 'Showing all 1 items' is displayed above a table.

The table lists the contents of the container. The first item is highlighted with a red box:

	Name	Last modified	Access tier	Blob type	Size	Lease state
☐	search_result_20260828_10-09-03.json	28/8/2026, 3:39:18 pm	Hot (Inferred)	Block blob	65.64 KiB	Available

At the bottom of the page, a note states: 'Add or remove favorites by pressing Ctl+L+Shift+F'.
